Production Control Solutions

Our engineering staff has implemented data acquisition, process/production monitoring, and automated control solutions across a variety of plastic manufacturing processes. By utilizing these solutions, you will have the information necessary to operate your production machinery at its peak capacity, delivering consistent, higher

After the production process is complete, your products need to be packaged and organized in the quickest, most cost-efficient way possible. Elm's mechanical engineers have designed robotic pick and place solutions that load and unload objects with expert precision.

Or, perhaps a conveyor system is the appropriate choice for your company. Elm can design, build and install that application for you as well.

Mechanical Solutions

24-7 Support

At Elm, we pride ourselves with not only being able to support our customers during implementation of new process control solutions and/or process automation, but also in providing our customers with continuous 24-hour support once their project has been completed. Our service team provides preventative maintenance support, such as Infrared Scans, to insure that your facility remains operational.
